MILITECH AVENGER  
**SPECIAL**

An old venerable  
coming back into  
the battlefield

Welcome to Issue 1 of Big Loads, a new zine focused on weapons in the era of 2070. As this is the first issue, it will be used to test the new format and experiment a bit with the style and the stats.

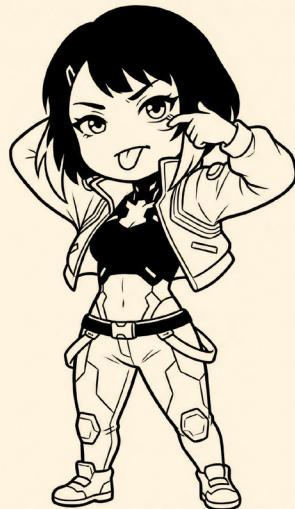

Short and sweet! It will be centered on a few variants for the Militech Avenger. An old goldie that can still sport some surprises thanks to the release of SoF45 in Interface 5.

The standard-issue sidearm of the United States Armed Forces in 2020, as well as the Lazarus Military Operations Group, the Militech Avenger was the sidearm of the US Military since 2005. Although it lacked body armor penetration, it made up for it with range and accuracy giving it a proven record as being a good firearm, it was issued mainly to rear-area officers and military police.

The 70TC is the factory-standard evolution of the Avenger platform for the 2070s. Militech engineers replaced the conventional firing pin with a miniaturized electromagnetic drive and shortened the barrel for maximum concealment. While this reduces effective range, it allows the weapon to fire hyper-velocity payloads that punch through modern body plating at ease. It is the preferred sidearm for corporate security and discerning businessmen who values fashion over brute force.

The classic 2005 workhorse, dragged screaming into the 2070s. This baseline update ignores high-tech gimmicks for raw mechanical output, featuring a retrofitted autosear and extended magazine. It transforms a reliable officer's sidearm into a pocket-sized suppression tool, emptying its clip in a terrifying storm of lead. It lacks elegance, but it's damn effective.
