

SCREAMSHEET

YOUR SOURCE OF INFORMATION ON THE STREETS

Arasaka is proud to announce the first fast response bipedal transport unit for all the forces around the globe.

The Arasaka BTU was born out of necessity to equip his own troops with a fast response vehicle capable of an all-terrain movement and heavy firepower without needing to have its troops be in constant alert inside a huge vehicle or ACPA.

The solution was in the form of an open canopy ACPA with retractable wheels and powerful electronic motor created with the partnership of Mitsubishi Motors.

The Arasaka BTU pushes the popular movie concept of powered skates to a new level with the Adrestia™ electric engine.

When the BTU changes mode, it lowers its height and rests over retractable powered wheels that sport an astounding top velocity of 145 mph. The Adrestia™ top of the line D-Chisei “dog brain” makes sure to assist the pilot in the driving, making the BTU no harder to pilot than your typical quad.

The engine even sports full off-road capability and improved heavy duty breaks, suspension and enhanced acceleration.

The bare bones version of the BTU is a greatly upgradeable and modular vehicle able to be fitted for any kind of heavy duty. From firefighting or industrial heavy working to police and mercenary work.

On the ACPA side of things, the BTU works on a Ninja advanced linear frame heavily modified to change its role as a vehicle.

Covering the machine, it wears a Dragonskin™ from Euroarms keeping it protected from infantry firearms but still light on its feet.

We don't recommend going face-off against heavy hitters!

The military grade advanced reflex/control systems provide an ideal quick and efficient method of control, the pilots only need a Vehicular Link implant to be able to control it.

The BTU comes equipped with search lights, a 200mts winch and a comm-link with 80km range by default.

Arasaka BTU-000 (bare bones)

Chassis type : Ninja (STR 20)

Lift./Cap.: 1000kg

Carry: 300kg

SIB: -4

DFB: -2

Open slots (AP):

Torso: 2

Arms: 2/each

Legs: 0

Kick damage: 3d10

Top Speed: 145 mph (48mph off-road)

Acc/Dec: 14/25 mph

Crew: 1

Range: 200 mi

Passengers: 0

Maneuver: -2

SP: 30

SDP: 30

Mass: 290kg

Extras: Comm-link (80km), Search lights (200m), Winch & grapple (20kg, 100m)

Cost: 42,000eb

To use the BTU as a PA you must use the Pilot PA skill (or special PA Combat skill).

It can change to vehicular mode (and back) in 1 round, and then you can use the Motorcycle skill.

For combat purposes it is treated as a vehicle, not as a PA. Legs can be targeted at -2 (having SP 20 and SDP 20).

Arasaka also sells a specialized trooper helmet. The Shikaku WA connects to the PTU giving the trooper IR vision, Low-lite, Smart targeting and Anti-Dazzle.

The Shikaku improves the BTU bonus:

SIB to +0

DFB to +1

It has 20 SP and cost 900eb
